

Verti-Drain 215.013SP + Carrier

The Verti-Drain 215.013 connected to a Carrier functions as a selfpropelled aerator. It is a high production aerator, penetrating up to 150mm deep into the soil with both solid tines and hollow coring tines. Heave can be set on the tines, so that compaction is relieved in the soil between the holes. Ground pressure is limited to a minimum, since most of the weight of the Verti-Drain 215.013 and the Carrier is carried and absorbed by the smooth front roller of the Verti-Drain and the wide tyres. Therefore the ground pressure per square centimeter amounts only 0.45kg.

Technical Specifications: Verti-Drain 215.013SP + Carrier

Weight:	950kg
Working width:	1320mm
Working depth:	up to 150mm
Engine:	32HP
Capacity:	3320m ² /h at 7.6cm forward hole spacing
Fuel capacity:	33liters
Speed:	0-6 km/h variable

Optional:	Rear roller
	Turf Hold Down kit
	Core Collector 3320m ² /h at 7.6cm forward hole spacing
