

Eye SPI

Blue

Spray Pattern Indicator

By adding Eye SPI to your liquid applications you can gain maximum performance and cost efficiency.

- ✓ Shows where you have sprayed
- ✓ Reduces risk of overlapping
- ✓ Missed areas are easily identified
- ✓ Shows when you have leakage
- ✓ Blocked nozzles easy to identify

Non Irrigant - Non Staining

5 Litre

ALWAYS READ THE LABEL
Made in the UK

Directions for use:

Add half the desired volume of water to the spray tank, add the chosen chemical/liquid fertiliser in accordance with the manufacturers direction, then add Eye SPI at the relevant dose rate (see below), then add the remaining water.

Rates of use:

1 ml - 2.5ml Eye SPI per litre of spray solution

The amount of Eye SPI used can be varied to suit all prevailing conditions, the higher rate of use will only manifest itself as a darker blue colouration on turf.

Precautions:

Store in the original container, in an appropriate area away from frost. Keep away from children and animals.

Spillages can be easily washed from skin and clothing with copious amounts of water. For optimum affect do not allow the product to dry on any given surface.
