

# Oxy-Rush<sup>TM</sup>

soil stimulant

## Oxygen for Life

- ✓ Improves Nutrient Availability
- ✓ Generates Oxygen for Beneficial Microbes
- ✓ Converts Anaerobic Soils to Aerobic
- ✓ Enhanced Rooting
- ✓ Removes Black Layer
- ✓ Thatch Reduction

# Oxy-Rush<sup>TM</sup>

soil stimulant

## What is Oxy-Rush?

- ✓ Oxy-Rush is a form of liquid oxygen compounds which delivers sources of biologically available oxidants to the soil.
- ✓ The formula is designed to hyper-accelerate the activity of indigenous beneficial microbes.

✓ Oxy-Rush allows tied up nutrients to become available.

✓ Oxy-Rush provides a less favourable environment for anaerobic and pathogenic bacteria.

✓ Oxy-Rush aerates the soil when the growing medium most needs oxygen.

## What are the benefits?

- ✓ Apply Oxy-Rush before, during and after aeration.
- ✓ When soils have become water logged.
- ✓ To release soil based nutrients.
- ✓ Before and during disease pressure.
- ✓ When soils are compacted.
- ✓ Throughout the growing season.

## When should you use Oxy-Rush?

## Applying Oxy-Rush to Improve Nutrient Availability

## Applying Oxy-Rush to Reduce Black Layer

## Applying Oxy-Rush to Reduce Thatch

# Oxy-Rush<sup>TM</sup>

soil stimulant

## Application

For general maintenance, and improved nutrient availability, to aerate the soil, to increase rooting, and to reduce disease pressure. Monthly applications of 10-15lts/ha in 600lts plus of water, and immediately water into the rootzone.

For Thatch reduction, apply 20lts/ha three times a year through the growing season, water directly into the thatch.

To remove Black Layer, and anaerobic conditions. Aerate to the desired depth, and apply Oxy-Rush at 15-20lts until conditions have subsided.

Oxy-Rush can be tank mixed with other soil based liquids, always do a jar test to ensure compatibility.

Oxy-Rush compliments all aeration practices, and in some cases has replaced them, where sports turf managers are under pressure to reduce tining, applications of Oxy-Rush have proved invaluable.
