

Angus Downcast™

Downcast is a non-pesticidal nutrient based liquid that improves turf health and encourages casting worms away from sward surface, thus reducing surface casts.

Angus Downcast™

Application rates:

1st application of the system (Sept - March):	20 litres / ha in 250 - 400 litres of water
Re-apply fortnightly if problem re-occurs: (sand based root zones may require more frequent application; suggest 10 day intervals)	10 litres / ha in 250 - 400 litres of water

Allow 2-3 days from application to begin to see the benefits of reduction in surface casts. *Reduce time between applications if very wet.* Best to avoid application immediately prior to rain and re-apply after rain.

Following inhalation: Remove to fresh air. Get medical attention for any breathing difficulty.

Following eye contact: Rinse cautiously with running water. Check for and remove any contact lenses if possible. Continue to rinse for at least 10 minutes. Get medical attention if symptoms are severe or persist after washing.

Following skin contact: Wash affected area thoroughly with soap and water or use an approved skin cleanser. Get medical attention if symptoms are severe or persist.

Following ingestion: If swallowed, promptly rinse mouth then drink large amounts of water. Do not induce vomiting. Seek medical attention.
